**THE CLIFFORD GROUP**

## OUR STORY

### The Clifford Group

At the Clifford Group, we have earned a sterling reputation as leaders in masonry, cladding, and historical restoration. Over the years, our dedication to excellence has brought about revolutionary changes to the technology, product development, and equipment in our field.

### What sets us apart

We place a strong emphasis on communication, innovative concepts, creative thinking, risk mitigation, and sensitivity to the environment. There is one more thing that sets us apart – our painstaking attention to every last detail. When everything is said and done, our dedication to industry excellence has not gone unnoticed. The countless awards that we have received are largely thanks to our people, the finest craftsmen and artisans who consistently perform to the highest standard, meeting and mastering every new and interesting challenge.

Our portfolio features some of the most recognized commercial and private addresses nationwide. We have collaborated with some of the finest design and architectural firms to enhance and restore city skylines nationwide. With each and every project we take it to the next level.

### Clifford Restoration

Our restoration division offers a full range of consultation, restoration, and conservation services. We are experts in all aspects of restoration including the use of historical materials to ensure accurate and authentic results.

### Clifford Masonry

Within the masonry industry, this division of Clifford has built a solid name for itself. Our masonry team works diligently to produce consistently high standards of quality, production, and innovation. We pride ourselves in delivering on time and on budget.

## SERVICES

-  Building Surveys, Fault Diagnosis & Defect Analysis
-  Façade Retention, Relocation, Dismantle & Rebuild
-  Masonry Conservation & Preservation
-  Roman Stone (cast stone) Reproduction & Installation
-  Grouted Reinforcing Anchor Systems (Cintec) & Structural Upgrading (carbon fiber systems)
-  Injection Grout Systems (Lime, Cement, and Resin based grouts)
-  Micro Abrasive Cleaning Systems (JOS, Rotec Vortex, Comco)
-  Proprietary Repair Mortar Installation
-  Stucco, Plasters & Interior Finishes Restoration and Conservation
-  Structural & Decorative Wood Restoration, Conservation, Repair & Replication

-  Wall Cladding Systems
-  Brick Installation
-  Block Installation
-  Paving
-  Precast Unit & Panel Installation
-  Natural Stone Supply & Installation
-  Manufactured Stone Supply & Installation
-  Plaza Redevelopment
-  Masonry Panelization

“The quality of their restoration work is excellent, driven by qualified and experienced site supervisors and restoration tradesmen for whom craftsmanship is the goal!”

**Taylor Hazell Architects Ltd.**

## **CASA LOMA** TORONTO

On an ongoing basis since 1994, Clifford has successfully been awarded numerous phases of the building envelope stabilization, including the salvage and rebuild of existing façade and structures, repair and replacement of existing sandstone and roman stone units, restoration of existing steel windows and conservatory skylight, and more.

## THE DON JAIL TORONTO

For Clifford, the Bridgepoint Hospital project was composed of two parts. The bulk of the project consisted of restoration to the existing building – the former Don Jail. A portion of this work included masonry cleaning, Dutchman and Jahn repairs, salvage and resetting of the interior stone floor, and installation of the new ventilator towers. In addition, Clifford also surveyed, documented, relocated and conserved the 85-foot long glass tile mosaic wall mural entitled 'Life' by Kitchener artist, Margit Gatterbauer.

## LISTER BLOCK HAMILTON

Clifford Restoration Limited was contracted to perform treatments, as required, upon defining a comprehensive scope of work to restore this culturally significant building in Hamilton. Work performed to the interior and exterior included masonry restoration, glazed architectural terra cotta repairs and replacement, window restoration, and installation of flashings to protect the façade from further deterioration. The exterior store fronts were repaired, in addition to the interior glazing and wood store fronts, which were reconstructed from the use of archival photos.

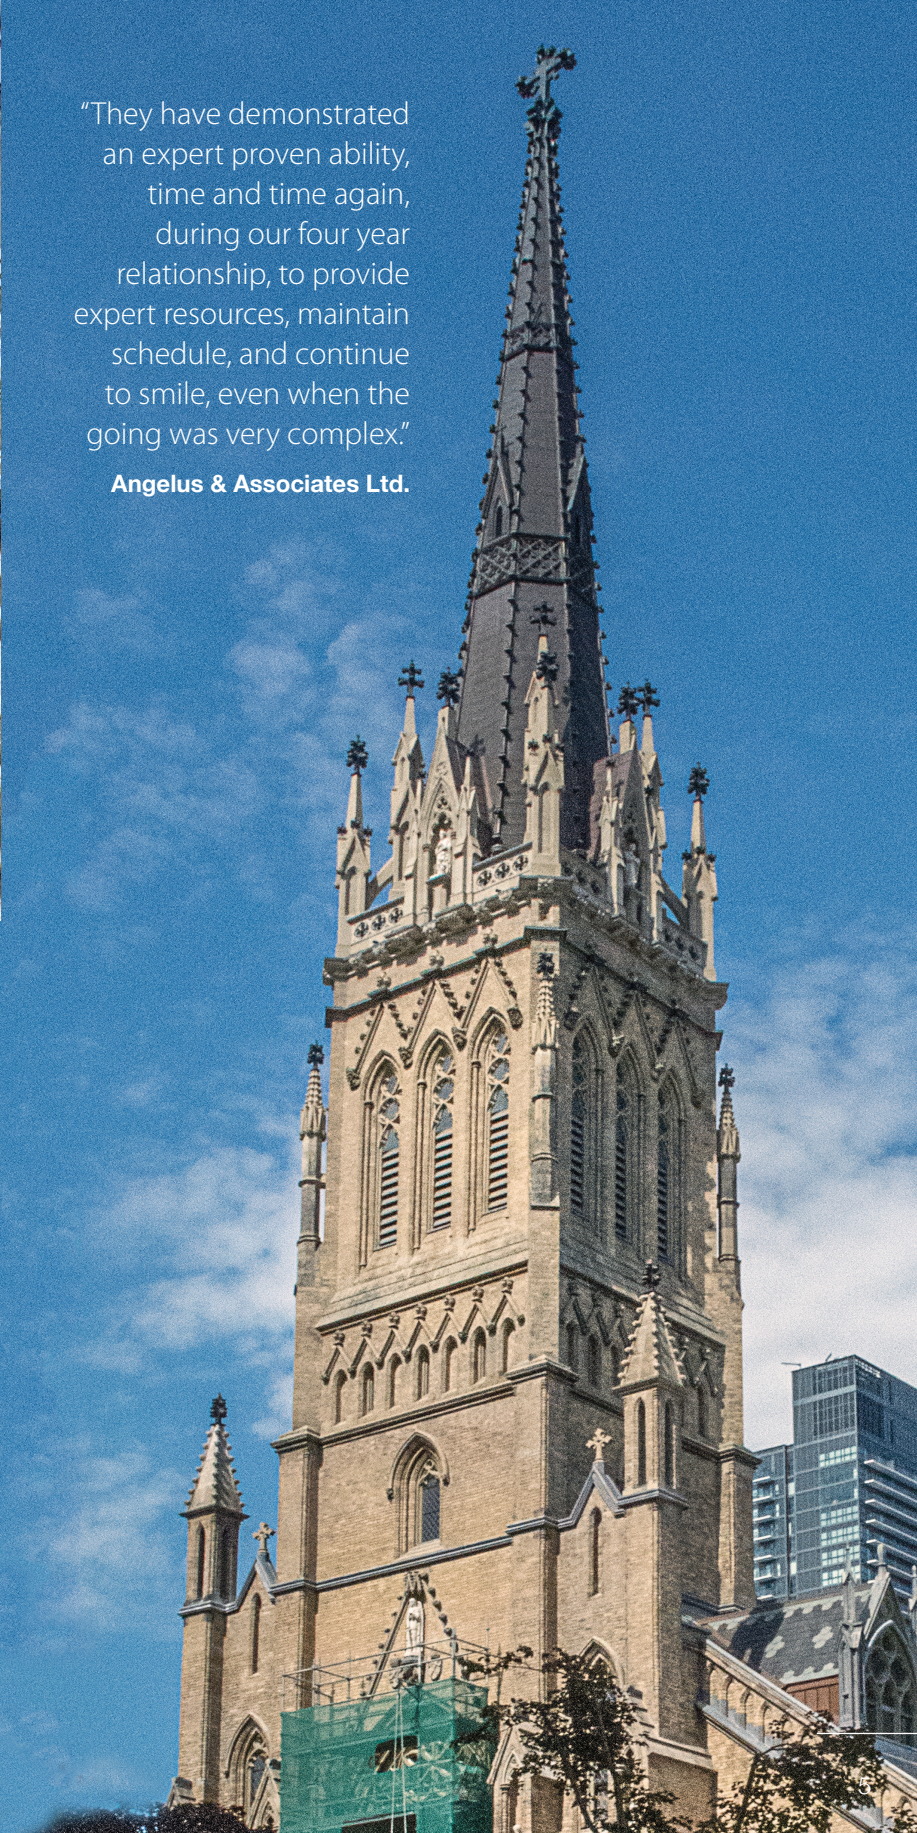

## ST. MICHAEL'S CATHEDRAL TORONTO

Over the course of numerous phases of restoration to the iconic Toronto Cathedral, the work performed at St Michael's included restoration to the basement crypts; exterior facade restoration; supply and install of new stone pinnacles, finials, cornice, and niches; narthex and liturgical finishes; new holy water fonts; and fenestration restoration.

"They have demonstrated an expert proven ability, time and time again, during our four year relationship, to provide expert resources, maintain schedule, and continue to smile, even when the going was very complex."

**Angelus & Associates Ltd.**

“The work at the Bay Adelaide Centre highlights an entirely different aspect of Clifford Restoration’s expertise. We highly recommend Clifford Restoration as one of the very best heritage general contractors working in the field in Southern Ontario.”

**ERA Architects Inc.**

## **BAY & ADELAIDE** TORONTO

The former National Building façade, originally constructed in 1926, is incorporated into a 51-storey office property. To restore the historical 12-storey Tyndall limestone façade, Clifford catalogued, dismantled, and removed the stone from site. Additional work involved full restoration of the steel windows with modifications to achieve a blast proof rating, complete replacement of shelf angles, and rebuild of Tyndall limestone at the West and North façade.

## MIZNER FOUNTAIN

PALM BEACH, FLORIDA

At the Town Square Memorial Plaza in Palm Beach, Florida, a historically significant fountain features four 'Hippocamp' (water horse) sculptures. During the most recent restoration and refurbishment of the entire town square, the sculptures were retained and conserved. The conservation work consisted of cleaning and repairs to the 'Hippocamps' before being reinstated into a replica of the main fountain.

## 2532 YONGE ST.

TORONTO

During the restoration of this building, masonry surfaces and the decorative aluminum spandrels were cleaned to showcase its detail, select windows and skylights were restored, and the telechron clock was repaired after years of not being operational. Replacement material was sourced for the wood and stucco jambs based on archival photos, which revealed the original material to be Red Marble.

"The quality of craft skills in masonry, woodwork, sheetmetal work and many other trades extends right across the shop and site personnel."

**ERA Architects Inc.**

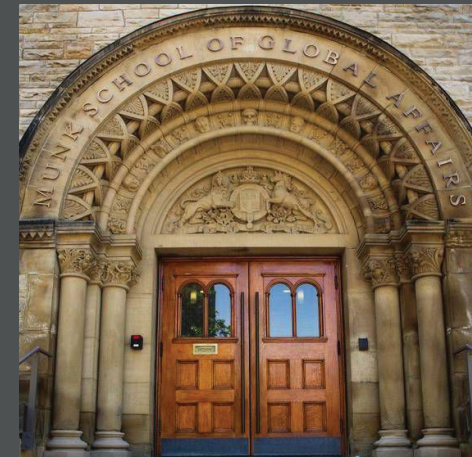

## MUNK SCHOOL OF GLOBAL AFFAIRS TORONTO

When the Munk School of Global Affairs expanded to 315 Bloor Street West, the former Dominion Meteorological Building was fully restored and renovated. Included in the conservation scope of work were masonry alterations, exterior façade restoration and cleaning, boundary fence restoration, and main entrance bronze lettering.

## R.C. HARRIS WATER TREATMENT PLANT TORONTO

Over the past six years, we have completed four projects at R.C. Harris. Of them, the most notable is the latter, for which Clifford was the general contractor. During this phase we completed the exterior brick and stone masonry restoration, interior brick and marble restoration, miscellaneous metals and flashing, and wood window and door restoration.

“Their project management demonstrates skill in planning and coordinating construction activities in support of the restoration program.”

**Taylor Hazell Architects Ltd.**

## ST. MICHAEL'S CATHEDRAL NAVE FLOOR TORONTO

All of the floors throughout the Cathedral were installed by Clifford Masonry. At the perimeter of the Liturgical Furnishings, there is a detailed Celtic knot pattern installed using multi slate tile colours. The pattern also highlights a newly designed Baptismal Fountain – also supplied and installed by the Clifford Group of Companies.

"On a scale of one to ten, I would promote Clifford Restoration as a twelve"

**Angelus & Associates Ltd.**

## HOLT RENFREW (SQUARE ONE SHOPPING CENTRE) MISSISSAUGA, DOWNTOWN DISTRICT

During the "Square One Mall" expansion project, granite cladding and brick veneer were installed for the new Holt Renfrew location that would join this collection of stores. A precast concrete base was also installed as part of the building's design.

Light being the primary inspiration for this project. The building acts as a vessel that is both animated and sculpted by light in a myriad of ways: casting patterns on exterior walls of Brazilian granite.

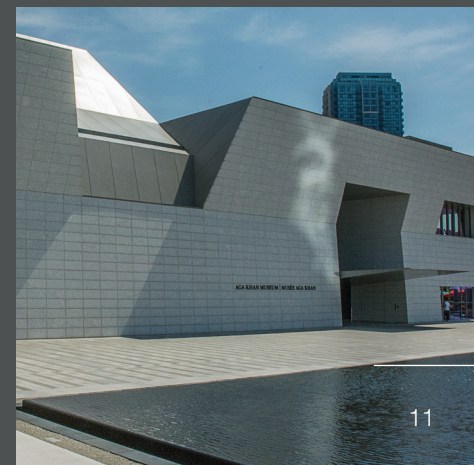

## AGA KAHN MUSEUM & ISMAILI CENTRE TORONTO

These two buildings, located in Toronto just off of the Don Valley Parkway, were built with the architectural value inspired by juxtaposing tile and masonry with wood. Showcased in the finished product are 7,000 square meters of stone cladding on sloped, curved, and multiplane surfaces.
